The First International Conference on Environmental Peacebuilding

Environmental stresses and related conflicts have created global humanitarian crises that have displaced 65 million people. Grievances over land and valuable natural resources both drive and fund global conflicts; since 1989, more than 35 major armed conflicts were funded by the extraction of resources such as diamonds and timber. While the environment is a silent victim of these conflicts, it can also serve as the foundation of peace, as post-conflict recovery relies on natural resources to support livelihoods, enhance economic recovery, and reintegrate excombatants. Resources can also provide mutual incentives and opportunities for communities to build trust.

The Environmental Peacebuilding Association emerged from the recognition that an integrated approach to the environment, conflict, and peace is of critical importance. Through our inaugural conference, we are furthering our mission of bringing together a global community dedicated to creating a knowledge base, raising awareness, and building capacity to support environmental peacebuilding.

OCTOBER 23-25th, 2019

BECKMAN NATIONAL ACADEMIES OF SCIENCE & ENGINEERING

Conference Partners

- Environmental Law Institute
- Nicholas School, Duke University
- University of California, Irvine
- Blum Center for Poverty Alleviation
